

ASK DR. FEIT...

Do you have a family member that suffers from headaches?

YES..

Headaches can be caused by a **nerve being pinched** at the base of your head. This can cause pain in the back of your head, temples, behind your eyes or in your jaw and face and can also lead to migraines.

An **adjustment** by Dr. Feit decreases the pressure on the nerves, correcting the problem. It's more than headaches and pain, that's your **body's way of telling you something is wrong**, and Dr. Feit has the expertise to diagnosis and fix this problem!

Dr. Feit use a very specific, gentle technique to correct this problem and eliminate your headaches.

Please feel free to share this with your family or friends who would benefit from this information.

We would be honored to help them!
